Installation Instructions Side Covers R1100 / 1150 GS

Contains:

1x Pair of side covers

Side covers do not only make the R11xxGS look nice and complete but they also more crash as well as tamper resistant! It diminishes the chance of clothing or riding boots getting stuck on the clamp. Seat will eventually scratch the upper part of the cover but they won't be visible when seat is installed. Clear film cover can also be added to avoid scratches. The paint on aluminium clips can also chip or crack from removing and reinstalling the side covers.

Installation:

Remove the seat.

Attach the side covers first with the upper clips. Push then the bottom down until bottom clips engage.

Should you have difficulty with the right side cover, it may be helpful to remove the black BMW side cover (1). Pull it carefully out of the rubber bushings. Cable ties and tank vent hoses may need to be rerouted slightly.

Make sure both side covers sit in tightly and reinstall the seat.
