Sidecover Set

BMW R1150GS Adventure

Parts included:

- 1 x side cover set
- 2 x support angles
- 2 x bolts hex M6x30
- 2 x washers M6

Preparation:

Remove the seat of the BMW R1150GS Adventure. Plan to assemble one side at a time. Unscrew one bolt of the mount of the electrical box (see also illustration below, the later position of the side cover).

Note that if both sides are released electrical box could slip. Also the following assembly of the support angles should be performed one side at a time. The grab rail will be completely removed if both sides are done at once.

Assembly:

Attach first the two enclosed support angles for the side covers. These are screwed on under the screws of the grab rail attachment. The locking pin of the support angle must point forward. You must align the placement of the support angle with the elongated holes. Set the side cover in place. This is pushed first in the back onto the locking pin and bolted in front with a bolt hex M6x30 with washer M6. Tighten the screw carefully, since the side cover is made of plastic and flexible. Finally you can replace your seat.
