## Installation Instructions Luggage Rack BMW R1200 GS

### Contains:

- 1 x luggage rack
- 2 x countersunk screw M6x40
- 1 x countersunk screw M6x20
- 3 x washer large M6
- 2 x spacer

### Preparation:

Remove the original BMW R1200GS luggage rack. It is attached with three screws, one on the top and two on the sides. (Please refer to your owners manual for additional info).

### Installation:

The Touratech luggage rack will be installed in the same points using the supplied spacers. Use the two supplied spacers for the side attachment (original spacers need to be removed) and the M6x40 screws and M6 washers.

Use the M6x20 screw and washer for the third attachment point on the top. You should be able to tighten it through the small round hole on the rack without disassembling the rack. Tighten screws only finger tight first and tighten to BMW specs when the rack is properly aligned.

Note that weight on the rack may change the handling characteristics of your motorcycle. Maximum weight on the rack is 5kg or approx. 10lbs

Suggested max. Speed  
130kmh or 80mph
