

INSTALLATION INSTRUCTION  
044-0465 Hard Part Radiator F800GS

Contents:

- 1 x Hard Part Radiator
- 1 x Foam strip

Attention, important tips, explanations:

Use medium strength thread locking compound on affected fasteners. Check all screws after 50kms/30miles, retighten if necessary, and check in regular intervals thereafter.  
Torque specification is 9Nm!

Assembly:

1. Remove the right side fairing screws and then the side fairing to gain access.
2. Remove the screws of the right side radiator bracket and remove then the bracket.  
Screws will be reused.

Longer screw will be used in the radiator attachment point (photo 1)

3. Cut the foam strip in two pieces of approx. 45mm and 65mm (1.75"/2.5")

Clean surfaces on the inside of the Hard Part and apply foam strips as shown in photo 2.

4. Hard Part will be installed as the original radiator bracket (photos 3&4).  
Tighten screws to max. 9Nm torque and use medium strength thread locking compound especially in offroad use.
