License Plate Brace  
F650GS/ Dakar

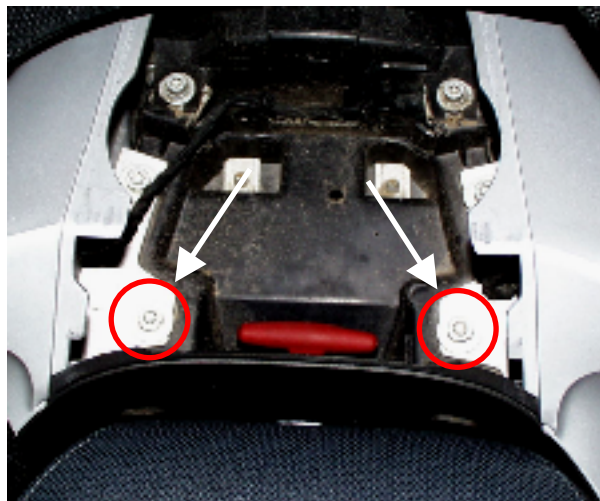

## Parts included:

- 1 x license plate reinforcement
- 2 x allen screw M6x35
- 2 x screw caphead M6x20
- 2 x spacer
- 4 x nut locking M6
- 6 x washer large M6
- 2 x washer small M6

# Mounting:

No additional holes are needed!!

Exchange the two marked screws on the inside of the luggage compartment for the two enclosed allen screws M6x35 with one large M6 washer each. You must fully tighten these two screws before further mounting, since the screws fit in threaded mounts in the subframe and cannot be pulled tight later.

The screws should now come through the bottom surface far enough to mount the license plate reinforcement.

Insert the spacers on the two screws. The license plate reinforcement is installed as shown with the two long holes above. The screws are fastened with two lock nuts and with one large M6 washer each. Leave the two nuts loose until all bolts are installed. The two caphead screws use the holes behind the license plate with one large M6 washer each and a lock nut to mount the reinforcements lower holes

Check all bolt connections at regular intervals.
