## Instruction Foto Tank Bag

This photo tank bag was designed for secure transportation of cameras and camera equipment. Camera equipment can quickly be accessed with quick-pull zipper. Additionally bag can be carried easily off the bike.

Inner walls, bottom and top have thick safe padding.

Two zippers are connected with a pull grip for quick and large opening of the bag. Velcro closure will help to seal the rear of the top between zippers.

Inner walls with velcro can be moved around to accommodate various sizes and shapes.

Special bag hood is stowed in the front pocket of the bag.

Two side pockets can be used to carry small items or additional bag straps.

Do not leave tank bag unattended on your motorcycle. Camera should of course be ready to use even off the bike!

Photo tank bag can be converted with the additional straps to be used as back bag or shoulder bag. See additional photos on the left.

Photo tank bag is secured to the base plate with sturdy zipper. Thick and soft base plate offers additional protection from vibrations of the motorcycle.

Upper velcro closure enables quick removal of the map holder. Larger map holder can be ordered as option.

Strong straps can be used to attach this universal photo tank bag on most motorcycles. Make sure to loop straps around sturdy motorcycle body parts, steering head, frame rails etc. Check that bag is securely attached before each ride!
