

## Installation Instructions

The best way to install the A990 bags on the KTM brand, Touratech, Hepco-Becker or SW-Motech crash bars is to hang the bag upside down and start with the bottom velcro straps first. Then rotate the bag up into place stopping to do the mid velcro straps and then finally into the upright position. Finish off with the upper velcro straps.

## Care and Maintenance

IT IS STRONGLY RECOMMENDED YOU TAKE OFF THE BAG EACH TIME YOU RETURN FROM A TRIP AND CLEAN ANY DIRT OR DEBRIS FROM THE BACK OF THE BAG. If you do not remove the bag periodically, there could result in scratches on the body of the bike.

It is recommended you open up the zipper and remove tools when returning your bike to the garage, IF riding when moisture or water was present. You may wash the bag with mild soap and water. Refrain from using a pressure washer on the bags, doing so will reduce the life of the bag.

**If you have a fully painted 950 tank, the bags will scratch the paint. It is recommended you put a tank protector or clear bra tape between the tank and bag.**

**Do not overstuff the bag! Doing so will result in a damaged zipper.**
